A reduced-scale NOAA nautical chart for small boaters

When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA’s Office of Coast Survey, the nation’s chartmaker
What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America’s commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart™?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=11316

[Coast Pilot 5, Chapter 11 excerpts]

Vessels should approach Matagorda Bay through the prescribed Safety Fairways. (See 166.100 through 166.200, chapter 2.)

Anchorage.—Vessels should anchor off the bar in the Matagorda Fairway Anchorages on either side of the safety fairways. (See 166.100 through 166.200, chapter 2.) With N winds or smooth sea, fair anchorage is available in 4 to 12 fathoms.

Currents.—The tidal current in Pass Cavallo is believed to attain a velocity of 2 knots with currents of 5 knots reported. It is reported to be very strong in the land cut through Matagorda Peninsula, especially on the runoff of the ebb after strong S winds. The current in Matagorda Ship Channel attains a reported velocity of about 3 knots and up to 7 knots under severe conditions. Daily predictions of the tidal current may be found in the Tidal Current Tables, Atlantic Coast.

Pilotage, Matagorda Bay.—Pilots are available for Matagorda Bay day or night. Ships having a beam greater than 102 feet or are more than 725 feet in length will only be piloted during daylight hours. The usual storm anchorages for small boats in Matagorda Bay area are: the Harbor of Refuge S of Port Lavaca, in depths of about 12 feet; Chocolate Bay, with depths of 3 feet; Lavaca Bay, on the E side of the N of the causeway, with depths of 4 to 5 feet; Lavaca River with depths of about 5 feet across the bar; Carancahua Bay with depths of 3 feet across the bar; and Tres Palacios Bay, off Palacios, with depths of 4 to 5 feet. Small craft should not anchor in Matagorda Bay in the vicinity of the land cut through Matagorda Peninsula as strong currents and turbulent water are reported in this area.

Halfmoon Reef extends about 3 miles off Palacios Point, the SW point of the tongue of land extending between the E and N portions of Matagorda Bay. This is a shell reef 100 to 500 yards wide, reported covered about 4 fee at low tide over the greater portion of its length. The reef is marked at its S end by a light.

Tres Palacios Bay, about 6 miles N of Palacios Point, is a shallow bay on the NE side of the center of Matagorda Bay. A Federal project provides for a channel 12 feet deep leading from the Intracoastal Waterway through Matagorda Bay and Tres Palacios Bay to three turning basins at the head of the harbor at the town of Palacios.

Palacios, a fishing and farming community, is on the W side of Tres Palacios Bay. Two elevated water tanks in the town show prominently from the bay.

Carancahua Bay, 6 miles W of Tres Palacios Bay, is a shallow, unimportant body of water frequented only by small pleasure boats and oil-drilling equipment. In 1982, it was reported that there were depths of 3 to 6 feet inside the bay. It was further reported that numerous wellheads, oyster shell reefs, platforms, and other obstructions, some marked by private lights, occupied the bay making navigation hazardous. Numerous beach houses are on both sides of the bay. (87) Keller Bay, an arm on the E shore of Lavaca Bay, is the site of oil exploration and development. Shell is barged through a privately maintained channel to.

Lavaca Bay, an arm of Matagorda Bay at its NW corner, has a general depth of 5 to 7 feet with several reefs near the head of the bay. A Federal project in Lavaca Bay provides for a 12-foot channel leading NW from Matagorda Ship Channel off Gallinipper Point for about 3.5 miles to a turning basin at the mouth of Lynn Bayou at Port Lavaca; another 12-foot channel about 1.6 miles above Gallinipper Point leading SW from Port Lavaca Channel for about 1.4 miles to N-S and E-W basins at the Harbor of Refuge S of Port Lavaca; and a 6-foot channel about 2.3 miles above the entrance to Port Lavaca Channel which leads N through Lavaca Bay to the entrance to Lavaca River, and through the river to Red Bluff, on the Navidad River, a distance of about 17.5 miles.

NOTES

Regulations for Ocean Dumping Sites are contained in 40 CFR Parts 200-209. Additional information concerning the regulations and requirements for use of the sites may be obtained from the Environmental Protection Agency (EPA) or from your local EPA office. Dumping is subject to the survey depths may have reduced the depths shown.

CAUTION

Gas and Oil Well Structures
Uncharted platforms, gas and oil well structures, pipes, piles and stakes are within the obstruction areas outlined by dashed diagonal lines. Additionally, uncharted platforms, gas and oil well structures, pipes, piles and stakes can exist outside the outlined obstruction areas, and within the limits of this chart.
INTRACOASTAL WATERWAY AIDS

The U.S. Coast Guard Navigation System is designed for use with nautical charts, and the exact meaning of an aid to navigation may not be clear unless the appropriate chart is consulted.

Aids to navigation marking the Intracoastal Waterway exhibit unique yellow symbols to distinguish them from aids marking other waterways.

When following the Intracoastal Waterway westward from Cambier to Pt. Breezeville, Fl, aids with yellow triangles should be kept on the starboard side of the vessel and aids with yellow squares should be kept on the port side of the vessel.

A non-persistent yellow band provides no lateral information, but simply identifies aids to navigation as marking the Intracoastal Waterway.

INTRACOASTAL WATERWAY

(Located on charts 113/1 and 113/9)

The project depth is 12 feet from New Orleans, La., to Annexes Pass, Fl.

Consult the U.S. Army Corps of Engineers for controlling depths and the U.S. Coast Guard Local Notice to Mariners for other navigation hazards or restrictions.

Warning:
The prudent mariner will not rely solely on any single aid to navigation; particularly on floating aids. See U.S. Coast Guard Light List and U.S. Coast Pilot for details.

Note: Chart grid lines are aligned with true north.

SIGNIFICANT HAZARDS TO NAVIGATION

Strong currents may be encountered in the vicinity of the entrance to Matagorda Ship Channel.

POLLUTION REPORTS
Report all spills of oil and hazardous substances to the National Response Center via 1-800-424-8802 (24 hours), or to the nearest U.S. Coast Guard facility. Information communication is impossible (93 CFR 153).

Radar Reflectors
Radar reflectors have been placed on many floating aids to navigation. Individual radar reflector identification on this chart has been omitted from this chart.

Nautical Miles
VHF Marine Radio channels for use on the waterways:
Channel 6 – Inter-ship safety communications.
Channel 9 – Communications between boats and ship-to-coast.
Channel 13 – Navigation purposes at bridges, locks, and harbors.
Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other vessels. Contact the other vessel, agree to another channel, and then switch.
Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here.
Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
