A reduced-scale NOAA nautical chart for small boaters
When possible, use the full-size NOAA chart for navigation.

- Complete, reduced-scale nautical chart
- Print at home for free
- Convenient size
- Up-to-date with Notices to Mariners
- Compiled by NOAA’s Office of Coast Survey, the nation’s chartmaker
Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America’s commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart™?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=12327

(Selected Excerpts from Coast Pilot)

Sandy Hook, the southern entrance point to New York Harbor, is low and sandy. A Coast Guard station, a radar tower, and a radio tower are near the northern extremity of Sandy Hook. The towers and a large green standpipe to the southeast are the most prominent objects on the northern end of Sandy Hook. Southward of the standpipe are several houses and Sandy Hook Light (40°27’42”N., 74°00’07”W.), 88 feet above the water and shown from a white stone tower, 85 feet high. This light, established in 1764, is the oldest in continuous use in the United States.

New York Harbor is the principal entrance by water to New York City and the surrounding ports. The harbor is divided by The Narrows into Lower Bay and Upper Bay. The Battery, the southern tip of Manhattan, is at the junction of East River and Hudson River. The main channel from the sea to the deepwater terminals in Hudson River has a project depth of 45 feet.

In addition to the usual aids, Ambrose Channel in its outer portion is also marked by West Bank Light, shown from a brown conical tower on a black cylindrical pier, in range with Staten Island Light, which is shown from a light-colored octagonal brick tower on a gray limestone base on the high ground of Staten Island at Richmond.

Sandy Hook Channel, project depth 35 feet, provides a secondary route from the sea to deep water in Lower Bay; it connects with Raritan Bay Channel to the westward, Chapel Hill Channel to the north, and Terminal Channel to the south. Chapel Hill Channel has a project depth of 30 feet. The entrance to Sandy Hook Channel is marked by Scotland Lighted Horn Buoy S, equipped with a radar beacon (Racon). The channels are well marked with navigational aids.

Swash Channel, a natural buoied passage between Ambrose Channel and Sandy Hook Channel, has a controlling depth of 18 feet, but care is necessary to avoid spots with a least depth of 13 feet near the sides of the channel and a spot cleared to a depth of 14 feet in about the middle of the channel. A lighted range, the rear marker of which is Staten Island Light, leads on a bearing of 305° to the junction with Chapel Hill Channel.

Caution.–Telegographic companies report serious interruptions of international telegraphic communications resulting from repeated breaking of their cables by vessels anchoring southeastward and eastward of the Pilot Cruising Area for Ambrose and Sandy Hook channels. The companies state that they will be glad to compensate any vessel, which, having fouled the cable, cuts away its anchor and chain in order to save the cable from interruption. Vessels making New York in thick weather and finding it necessary to anchor before entering Ambrose Channel should anchor in the area southward of Scotland Lighted Whistle Buoy S (40°26’33”N., 73°55’01”W.) and westward of 73°48’00”W.

Caution.–Numerous fishing floats reported in the approach to New York Harbor in the Traffic Separation Scheme precautionary area.

Physical Oceanographic Real-Time System (P.O.R.T.S.) is an information acquisition and dissemination technology developed by National Ocean Service, NOAA. The Port of New York and New Jersey Physical Oceanographic Real-Time System can be contacted via telephone 866-217-6787 or the Internet at: http://www.co-ops.nos.noaa.gov.

Dangers.–There are five shoal areas in the entrance to New York Harbor which are subject to change in depths and should be avoided by strangers. False Hook is off the northeastern side of Sandy Hook. Flynn’s Knoll is between Swash, Sandy Hook, and Chapel Hill Channels. Romer Shoal, between Ambrose and Swash Channels, is marked by Romer Shoal Light; a fog signal is sounded from the light station. East Bank is northward and eastward of Ambrose Channel. West Bank is westward of Ambrose Channel between West Bank (Range Front) Light and Fort Wadsworth. Numerous rocks and obstructions lie between West Bank and the western limit of Ambrose Channel. The chart is the best guide. The tip of Sandy Hook is changeable, and the area around it is subject to severe shoaling; caution should be exercised in the area.

Mariners are cautioned to maintain a sharp lookout for floating debris in the harbor and channels.
NOAA's navigation managers serve as ambassadors to the maritime community. They help identify navigational challenges facing professional and recreational mariners, and provide NOAA resources and information for safe navigation. For additional information, please visit nauticalcharts.noaa.gov/service/navmanagers. To make suggestions or ask questions online, go to nauticalcharts.noaa.gov/inquiry. To report a chart discrepancy, please use ocsdata.ncd.noaa.gov/idrs/discrepancy.aspx.

Lateral System As Seen Entering From Seaward
on navigable waters except Western Rivers

Note: Chart grid lines are aligned with true north.
RACING BUOYS

Racing buoys within the limits of this chart are not shown herein. Information may be obtained from the U.S. Coast Guard District Offices as racing and other private buoys are not all listed in the U.S. Coast Guard Light List.

LOCAL MAGNETIC DISTURBANCE

Differences of as much as 5° from the normal variation have been reported in the vicinity of Latitude 40°25' 6" N, Longitude 74°04' 3" W.

NOTE H

Subsurface hydroacoustic arrays and fish pots located within dashed area. Arrays are 22 feet in height, secured to bottom by concrete moundings. Occasional pop-up buoys may be present as arrays are released for retrieval.

LEONARDO HARBOR CHANNEL

The controlling depth was 7 1/2 feet, for a width of 900 feet from the channel entrance (40°22' 67" N, 74°03' 21" W) to approximately 600 feet seaward of the breakwater. Depths of less than 10 feet are encountered seaward of the breakwater (40°22' 57" N, 74°03' 50" W).

Av. 2018

NOTE C

Docties deeper than charted may exist in borrow areas.
VHF Marine Radio channels for use on the waterways:

Channel 6 – Inter-ship safety communications.
Channel 9 – Communications between boats and ship-to-coast.
Channel 13 – Navigation purposes at bridges, locks, and harbors.
Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other vessels. Contact the other vessel, agree to another channel, and then switch.
Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here.
Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
